

# Handling Instructions for *Lead Wires*

Before disconnecting and / or attaching the lead wire to any modality the power must be disconnected.

Insert pin or banana connector all the way into the electrode.

When removing electrode from the lead wire, please grasp the plastic strain relieve – **NOT THE LEAD WIRE** – to prevent damage to the lead wire.

## CAUTION

The lead should never be pulled apart by hand; it must be carefully separated using scissors or a knife. Pulling the lead apart by hand can tear the insulation and expose the wires.
